About This Game

Sort the Cube is a minimalistic puzzle game in which you have to arrange all the sides of a cube in the proper order by sliding around the little pieces that make up the cube into the blank spot.

The game features:

- Several cube sizes
- A couple of images
- Selectable shuffling

So prepare yourself and start putting those little cubes into their places. And don't forget that the cube has six sides.

sort in cube. sort the cube

Fun, simplified tank combat. Visuals are pretty nice, wish the game were optimized a bit better though. Feels like it takes more to run this at a reasonable framerate than the game is really pushing out. Controls might confuse you a bit at first since reversing actually inverts your controls. Biggest gripe I can think of with this game is the lack of players, as I'm guessing this is pretty obscure. Be sure you have a couple of friends to play this with.. This is the pre-order bonus as DLC. Do not buy it, the weapons aren't worth it. Great base game though.. Simple, but damned fun.. Fun party game, especially if you can't draw for♥♥♥♥♥. Great DLC! Definitely worth the \$1.99 pricetag, IMO. The addition of 4 new characters and a few new game mechanics help keep the game nice and fresh for such a cheap price.. It was a five bucks well spent for me. Quite realistic as if peering through a microscope lens, except all appears much better focused. The amount of detail and rendering seems incredible. Great game to train your reflexes with and learn to appreciate the micro nature. The soundtrack is great for passing out on sleepless nights. Too bad though you control and evolve a nasty little crustacean instead of one of those squids that attack you. And you don't really evolve in the Spore sense, only choose if you want to be carnivorous, herbivorous or a siphoning absorber. Really stupid title of course, but many software developers presently capitalize on stupid trends for profit, ever since cool associated with the Rock music, gas-guzzling Corvettes and sexism went out of fashion. I would have called it the Superbug, the Grinder, the Surreal Mandible, the Luminator, or the Taxis Odyssey or Taxis Meyham.. If you have a HOTAS or maybe two joysticks laying around; this is totally worth the 5 bucks you will spend on it. Its playable with a controller, but its way superior with better input hardware. Its got a little depth, but its mostly simple space flight/combat stuff. Has multiplayer but I havent tried it yet. Also, it works with Trinus VR quite nicely.. I NOT CAN PLAY. A powerful but cursed unit that requires some finesse to play as he can accidentally AOE all his team-mates to death if not used with care. Destructive mage caster class.. Good assortment of things i guess. Most notably the Fishcabin XS plus. NOTE TO DEVELOPERS: I would buy more DLC content but you don't give stats on a lot of items You go into great detail on lures, jigs, and baits, but fail to give very important details on reels, rods, and equipment that don't have unpackaged in-game counterparts.

For this pack details are missing from these items. It is vital to know some of this information before purchase. While these rods are purchasable in game Minus the "sport edition" name and custom color.

Reel: Sports Edition Callisto MG 3000 (same as Callisto MG 3000) Req. level 13+\$5000

Rod: Sports Edition Nero 12' 10" (Same as Nero 12' 10") Req. Level 15+\$3870

FishCabin XS Plus (Same as in-game FishFort XS; Req Level 26) 22lb single fish weight, 154 lb total

If you get this package for nothing else, definately get it for the FishFort. The Sport Heavy Casting pack DLC includes the in-game equivalent FishCabim M Plus which is Req level 22 single fish weight 66lb and max weight 154lb. Slightly better, but cost 150 baitcoins without the DLC.

While the rod and reel are helpful early on they quickly lose usefulness.

Final DLC not included in the Season Pass BS fixed review now positive.. I really like this kit, it's nice that it includes xt railgun. It's definitely a fun and effective combo on the battlefield.. Overall the game is enjoyable.

However, you cannot modify the controls

also the controls are not responding well at certain instances of the game

The controls are the major problem this game has. I was really critical of The Prodigy, the first game in this series, after my first couple of playthroughs, and I critiqued the middle instalment, The Hero Project at the same time.

I stand by my opinion on The Hero Project - it doesn't fit one whole half of the choices encouraged in the first game, it's opening act overrides choices given at the end of The Prodigy, and in general it's a random insertion of a reality-show-based stage to kill time while the third act is being set up.

The Prodigy grew on me somewhat when I revisited it, but overall, this trilogy are the weakest of the Choice of Games games I've played. This instalment finally feels like an actual superhero story from the comics, a rollicking good Big Summer Crossover Event exploring the setting's ideas, advancing storylines, and setting up new ideas for further comics, etc, where The Hero Project was clunky and The Prodigy spent too much time filling in a science-fictional world in which to place its superheroes.

However, it's still the only Choice Of Games product I've yet played which keeps putting the game mechanics in the text. And that's clunky as all get out.

A middle act that stripped out the reality show aspect of THP while doing the same conflict with the InfraOrder and the Meek, strip out the more obvious gamist intrusions and, if the game proved too hard for people to continue on without those in-text hints, some recalibration - I mean, transferring your health to beef up your power reserves as a character option ahead of combats? What? Utterly out of genre and out of narrative - and I'd be praising this series. As it stands, it's just not on the level of their best, but overall, may be worth a look if you like supers.. These tracks are boring.

Not "zen" or "relaxing". Boring.

I purchased this soundtrack in hopes of experiencing the same mood that one does when they play the Race the Sun game. It's a wonderfully simple game and the music excellently expresses the wonder of soaring across planes of obstacles, the stress of watching the sun go down, and the melancholy of death.

The OST is a completely different mix of these songs. Only one of them exceeds 3 minutes, so the entire minute of near-silence preceding almost every song means that you're halfway into a track before anything musically interesting happens.

The actual clips of audio used to make those glorious loops in the game represent about 15 to 30 seconds in the actual track, so I'd have to edit these tracks myself to listen to what I actually wanted to hear.

Finally, this OST operates under some sort of precedent that no less than 10 seconds of pure silence can end a track, almost triple that in one case.

This OST is not worth \$2 independently. It should come with the game.

TL;DR: Expected OST to expand upon songs from the game, got brief clips of music and excessive silence instead.. Having played a while I would say the gaming scene creates futuristic feeling and it sets up a lot of brain cell killing quizzles. Especially after game patched up with the latest attempt now it has optimised gaming experience dramatically and speeded up graphic card performance. I remain to enjoy fun out the VR perception and story. GOOD GAME!! A senseless zombie killing shooter it says it all you will have fun with this game shooting zombie for a while but I wouldn't think it can become your all time favorite game

Provide about 10 hours of playtime. high quality visual, just a bit too short, run two time to get all cg. Well i liked it for the first two hours now i can't play it because I don't have a dx9 pc
